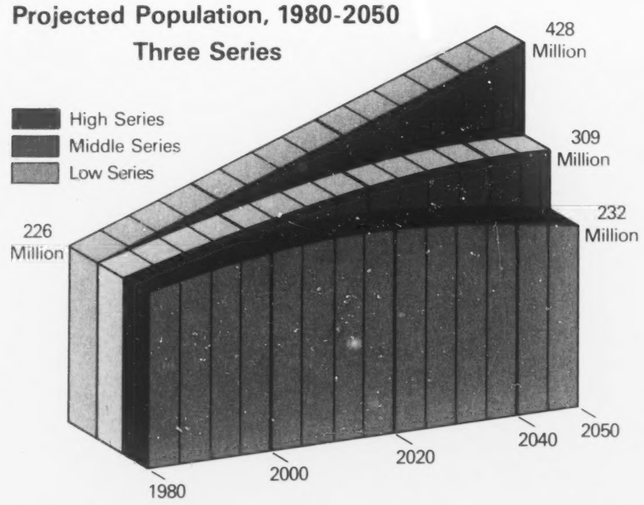
The United States Population Data Sheet of the Population Reference Bureau, Inc.

a demographic portrait
of the
American people

PRB

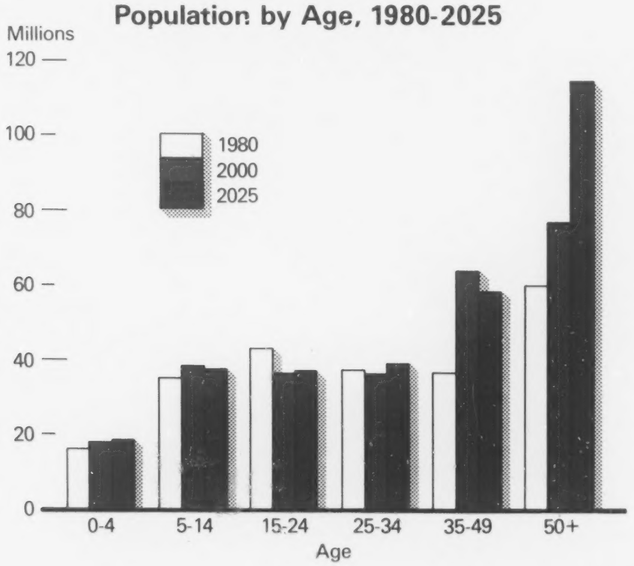
charting the trends

Projected Population, 1980-2050
Three Series



. . . three possibilties for future U.S. population — the highest with an eventual 2.3 children per woman and immigration of 750,000 per year, the lowest with 1.6 children per woman and 250,000 immigration . . .

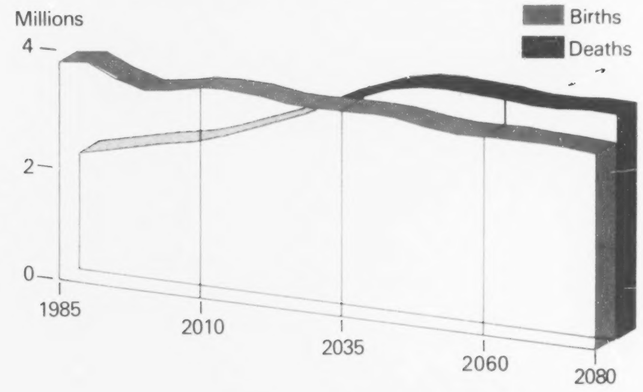
Population by Age, 1980-2025



. . . the future of U.S. population growth will be a future of its aging population, assuming that the birth rate remains at its current level . . .

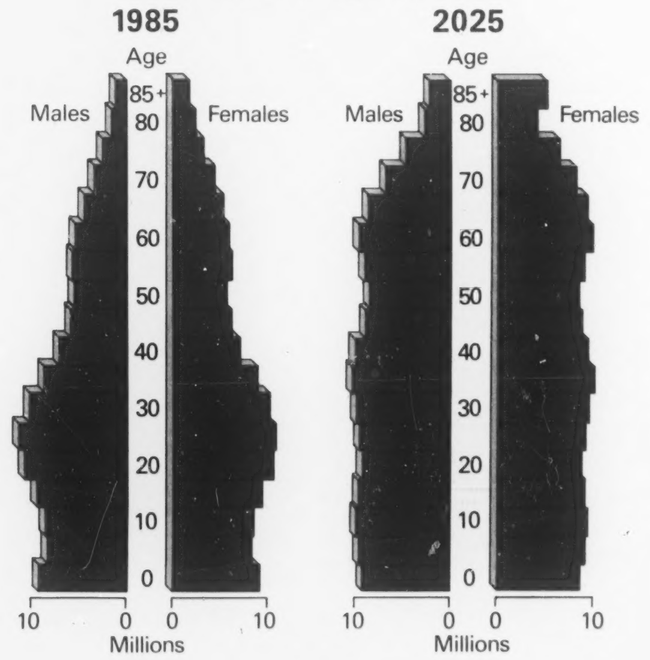
1

Projected Births and Deaths 1985-2080



. . . under the assumption that U.S. women will average about 1.9 births each, the number of births will fall below deaths by about 2035 . . .

Population by Age and Sex

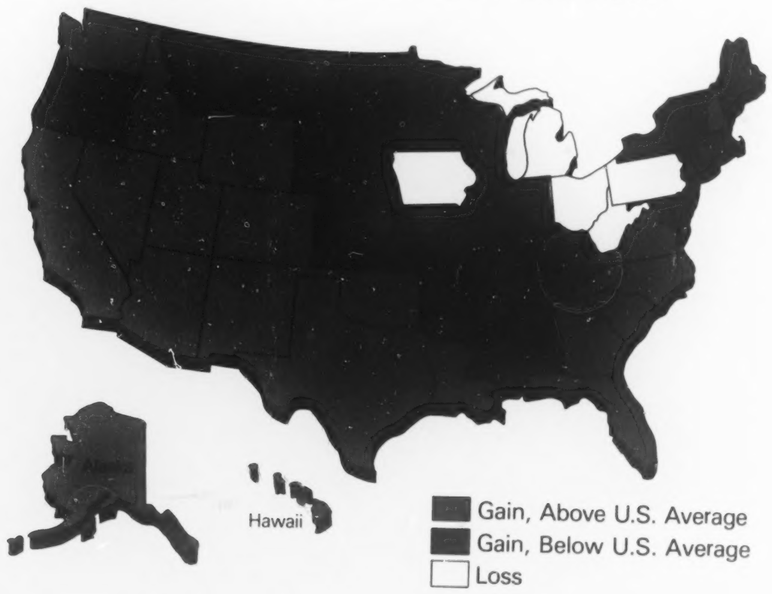


. . . a changing age structure will have many implications for future decisionmakers . . .

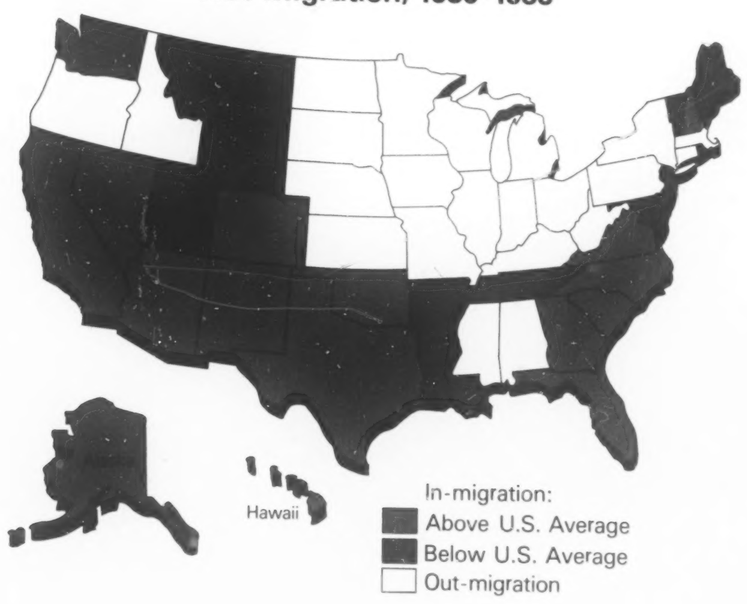
2

mapping the states

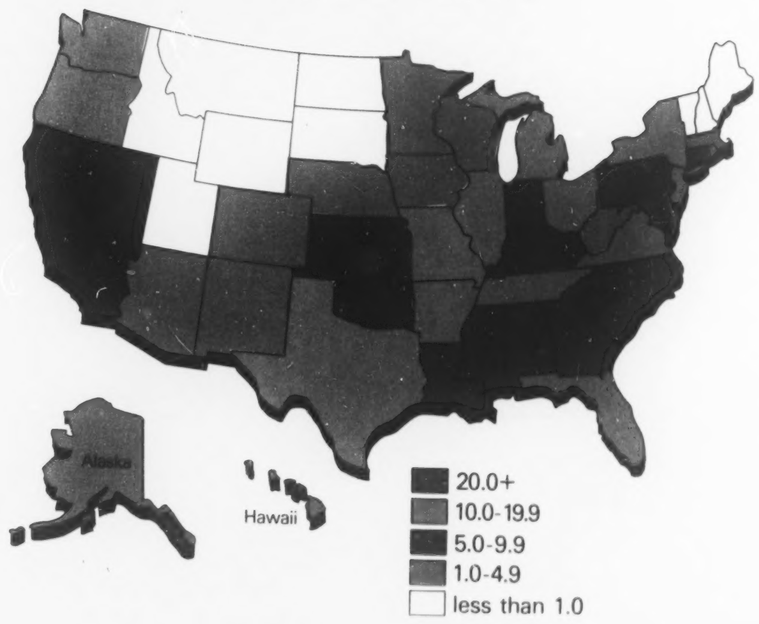
Population Gain or Loss, 1980-1985



Net Migration, 1980-1985



Percent Black, 1980



Percent Hispanic, 1980

	Year of Admission to Statehood	Capital City		Year of Admission to Statehood	Capital City

Mississippi	1817	Jackson	Wisconsin	1848	Madison
Missouri	1821	Jefferson City	Wyoming	1890	Cheyenne

General Notes

The United States Population Data Sheet is modeled on PRB's other *Data Sheets*, such as the *World Population Data Sheet*, and those featuring statistics on the world's women, youth, and children. Data are given for the four Census Regions (Northeast, Midwest, South, and West) and the nine Census Divisions(New England, Middle Atlantic, East North Central, West North Central, South Atlantic, East South Central, West South Central, Mountain, and Pacific). Dashes indicate that a particular category is either not applicable or not available. Rankings are based upon unrounded data.

Sources and Definitions

Resident Population (excluding armed forces overseas) and data on **total births, deaths, migration, and age for 1985** are from a forthcoming issue of U.S. Bureau of the Census, *Current Population Reports*, Series P-25; 1970 populations are from the 1970 Census. The **projected state populations for the year 2000 and the percent age 65 and over for 2035** are from the Bureau of Economic Analysis, *1985 OBERS, BEA Regional Projections to 2035*. These projections base future state populations upon projections of state labor force, which are, in turn, based upon projections of state economic outlook. **Total area** includes 3,539,289 sq. miles of land and 79,481 sq. miles of water. (Note: 1 sq. mile = 2.59 sq. kilometers). Data are from U.S. Bureau of the Census, *Statistical Abstract of the United States, 1986*. The **total fertility rate(TFR)** is an estimate of the average number of children a woman would have given the age-specific fertility rates of a given year; these are from the National Center for Health Statistics, *Birth and Fertility Rates for States, United States, 1980*, Data from the National Vital Statistics Systems, Series 21, No. 42. **Births per 100 deaths** indicates the ratio by which births exceed deaths in each state; this ratio is a product of both the level of fertility (indicated by the TFR) and the age structure of each state. The **infant mortality rate**, or the number of deaths to infants below age one per 1,000 births is from the National Center for Health Statistics, *Advance Report of Final Mortality Statistics, 1984*, Monthly Vital Statistics Report, Vol. 35, No. 6 Supplement(2). The **Number of counties and the percent losing population** are from U.S. Bureau of the Census, *Current Population Reports*, Series P-26, No. 85-52-C, "Provisional Estimates of the Population of Counties: July 1, 1985." The percent of **High School Dropouts** is derived from the U.S. Department of Education, *State Education Statistics*; this rate was calculated by dividing the number of public high school graduates by the ninth grade enrollment four years earlier, adjusted for interstate migration. **Percent of college graduates** (persons age 25 and over) are from the 1980 Census. **Crimes per 100,000 population** are from the Federal Bureau of Investigation, *Uniform Crime Reports for the United States, 1985*. **Percent of Females in the Labor Force** is from the U.S. Bureau of the Census, *State and Metropolitan Area Data Book, 1986*. **Immigrants from Abroad** are from the U.S. Immigration and Naturalization Service, *Statistical Yearbook, 1984*. Maps and charts: data are from the decennial censuses, estimates of the U.S. Census Bureau, and the National Center for Health Statistics.

notes

The Population Reference Bureau is a private, nonprofit educational organization, founded in 1929. PRB members receive more than 25 informative publications each year: four annual POPULATION BULLETINS written by recognized authorities; the lively monthly news magazine POPULATION TODAY; the annually updated WORLD POPULATION DATA SHEET and UNITED STATES POPULATION DATA SHEET wall charts; the quarterly population education newsletter INTERCHANGE, accompanied twice a year by a self-contained student reading; and POPULATION TRENDS AND PUBLIC POLICY reports on the policy implications of current demographic trends, as they appear.

PRB also publishes the POPULATION HANDBOOK, a handy reference to the basics of demography, in a standard edition (revised and updated in 1985), and international editions in English, Spanish, French, and Arabic, and other special publications.

PRB's Information Resource Center responds to population-related inquiries by mail, telephone, or in-person visit. PRB's Demographic Information Service Center (DISC) offers personalized, in-depth data and analyses for individual clients seeking professional interpretation of population trends.

Members of the Population Reference Bureau support an organization that is dedicated to the objective analysis and reporting of one of the world's most compelling concerns.

For information on PRB membership or publications, please call or write:

Footnotes

[a]The total fertility rate approximates the average number of children a woman would have during her lifetime given the age-specific fertility rates of a given year.

[b]The number of deaths to infants below age one per 1,000 live births in a given year.

November 1986
